**Re: Tauris Software Update – New Software available.**

Dear Tauris Users

Please note that following SANPO correspondence highlighting SANPOs unfavourable position regarding the new Tauris Software version 1.52 which restricted the original old Tauris Kompakt users to couple maximum 100 pigeons, Tauris have obliged and have brought out their latest software version addressing this issue.

The undermentioned self-explanatory e-mail says it all. The Original Old Tauris Kompakt can again with this new software accommodate the 200 bird coupling which places these Tauris users back in the position they were when purchasing their Tauris Kompakt years back.

Please note that this software will be distributed by the loacal agent as soon as it has been approved by SANPO – which we are hoping is a mere formality. We await the Tauris Software soonest to conduct test and hopefully approve such software for use in the SANPO Sanctioned Races.

We thank Tauris Germany for accommodating our requirements in South Africa.

Trust the attached is as good news for you as it is for us.

Yours in Sport  
Shane Gerber  
SANPO Clock Committee Chairman

**Subject:** TauRIS Software

Dear Mr. Gerber,

Herewith we inform you that there is a new software for users of the Electronic Clocking System TauRIS in South Africa. The descriptions are as follows:

Terminal software TS-ZA 8.23  
Club software CW-ZA 1.52

This software for South Africa is the version which is the valid from now on with immediate effect. All previous software versions will no longer be supported and no longer be further developed.

With this new software version the terminals TauRIS kompakt (with small memory) can store loft stocks of 200 pigeons.

We have transferred the new software to our dealer Mr. Meredith Shaw and have instructed him to put this software in circulation in South Africa.

For any further questions please do not hesitate to ask. We are looking forward to hearing from you again.

Kind regards  
Rüter EPV-Systeme GmbH
